Safety Alerts Module

PowerHealth Solutions
>>> Driving hospital efficiency

in partnership with **Datix®**
Software for Patient Safety

Datix Safety Alerts software has been designed to help you disseminate communications from the Department of Health's Central Alerting System (CAS), the Medicines & Healthcare products Regulatory Agency (MHRA) and the National Patient Safety Agency (NPSA). You can also use Datix to distribute communications from your own or other organisations, including internal security alerts and NICE guidance.

Broadcast information about medical devices and other safety issues, automatically recording responses and formulating action plans.

Datix helps you to keep staff, partner organisations and GP practices informed about major health incidents such as pandemic flu. In the event of an outbreak, Datix software can manage and monitor the flow of information between healthcare professionals responsible for dealing with the outbreak.

Compliance with standards

Using Datix can help you meet the requirements of the Care Quality Commission and the NHSLA, as your organisation can use Datix to demonstrate that it has systems in place to monitor overall compliance with the relevant policy documents.

Tracking equipment alerts

Datix Safety Alerts software allows you to record the items of equipment that are in use at your organisation and where they are located. This means you can instantly see whether an alert about a medical device applies to you and which departments or people the alert should be sent to.

Reporting to the board

Reporting to the Board is simple, as Datix generates a wide range of reports quickly and easily. Information from Datix can also be made available on the Trust's Intranet, allowing managers to view progress and action plans for alerts. Comprehensive security ensures that only those people who need to view the information have access to it.

About PowerHealth Solutions

PowerHealth Solutions is an Australian IT company specialising in patient safety, healthcare costing, and patient billing. We are the exclusive Datix distributor for Australia and New Zealand.

With many international clients, we have a very strong customer base in Australia and New Zealand, which includes public hospitals, State Health Departments and District Health Boards, and private hospitals.

ISO 9001 accredited since 2001, we are highly experienced at software implementations, with skilled resources to ensure that our systems are up and running quickly for a rapid return on your investment.

About Datix

Datix is a global supplier of software for patient safety, improving quality, risk management, incident and adverse event reporting.

We aim to help healthcare organisations build a culture and practice that drives excellence in patient safety.

Datix customers number among some of the world's leading healthcare providers. In the UK, more than 75% of the NHS uses Datix. We have a proven track record in very large, system-wide implementations in the USA, Canada and Australia, as well as some significant hospitals in the Middle East and Europe.

Information distribution using Datix safety alerts module

Users at each level in the cascade will record a response which is read by the user at the level above them. In the below example, the junior managers will add a response which is read by the senior manager above them. Those senior managers will gather the responses from their junior managers and record their own response, which will be read by the Safety Alerts Coordinator. There is no limit to the number of levels to which an alert can be cascaded.
